

A storefront that lets people *see the engraving* before they buy.

Signet Laser has the brand, the machines, and the work. What it does not have is a way for a customer to find a piece, personalize it, and pay for it at eleven o'clock at night without texting you first.

THE SHORT VERSION

What you are buying

A custom-built online store for Signet Laser: your catalogue, your personalization flow, your checkout, and a custom-quote intake for the corporate and bulk work that does not fit in a product page. Built on Next.js with Square handling payments — so there is no monthly platform tax on top of your card fees, everything you sell is managed from one admin, and nothing about the personalization experience is limited by what a theme will allow.

The centrepiece is the live engraving preview you have already seen in the mockup. A customer types their monogram, picks a style and a placement, and watches it appear on the piece. None of the three sites you sent us can do that. It is the single clearest reason someone buys from you instead of the shop one town over.

100%

YOURS — DATA, LIST,
SQUARE

Where you are now

The brand is finished and it is good. The wax seal, the script wordmark, and the parchment palette in your existing artwork are a complete, distinctive identity — most of our clients start a project by paying to get to where you already are. Everything in the mockup is drawn from your own files.

What is missing is the transaction. Right now every order is a conversation: a message, a back-and-forth about size and wording, a hand-written price, a payment arranged some other way. That works until it doesn't, and it caps you at the number of conversations you can personally have in a week. It also means the customer who wanted a \$54 set of coasters at midnight simply doesn't buy them.

A store does not replace the conversation for complex work. It removes the conversation from the simple work, so your time goes to the jobs that actually need you.

What we took from each

Six Eight Woodworks

sixeightwoodworks.com

TAKE

Photography-led restraint. Two nav items, one enormous image, the product doing all the talking. This is the feeling we designed toward — quiet, confident, craft-first.

LEAVE

Two nav items will not survive five categories and a custom-quote path. We keep the calm and add the structure.

Sonoma Laser Engraving

sonomalaserengraving.com

TAKE

The commercial architecture: personal gifts, corporate gifts, rush work, a gallery, and a named list of clients. That split is correct for engraving and we have used it.

LEAVE

It reads as a Shopify theme with a logo dropped in, and "by appointment only" on the homepage of a shop fights the shop.

This & That Vinyl

thisandthatvinyl.com

TAKE

Group stores. Each league, school, and organization gets its own page with a fixed product list — the customers order and pay directly, and nobody collects cheques.

LEAVE

The catalogue is organized around who ordered rather than what it is, which makes it hard for a stranger to shop.

Not one of the three lets a customer see their engraving before they pay. That is the gap we are building into.

What gets built

INCLUDED AT LAUNCH

- **Eight pages** — Home, Catalogue, Product, Custom Quote, Gallery, About, Contact, and policy pages
- **Catalogue** up to 40 products, with categories, filters, sorting, and search
- **Personalization engine** — engraving text, style, and placement with a live preview, on up to six product templates
- **Square checkout** — cards, Apple Pay, Google Pay, Cash App Pay, tax and shipping rules, order confirmations
- **Your own admin portal** — add and edit products, prices, variants, photography, and categories yourself, without calling us
- **Order dashboard** where you see orders, engraving details, and proof status in one place
- **Proof workflow** — upload a proof, customer approves by email, order moves to production
- **Custom-quote intake** with artwork upload and instant acknowledgement
- **AI lead assistant** that organizes every quote request and drafts a first reply for you to approve
- Mobile-first build, accessibility pass, page-speed optimization
- SEO structure, metadata, sitemap, and Google Business Profile setup
- Managed hosting, SSL, daily backups, security patching, uptime monitoring
- Content edits and product adds handled for you any time you would rather not, plus a monthly traffic report

DELIBERATELY LATER

- **Group and team stores** — the This & That model. Worth doing, but it needs one real client to design around. Included in Commerce Pro, or \$450 per store added later.
- **Artwork upload inside the product page** — customer-supplied logos going straight into a preview. Adds a review step and real complexity; the custom-quote path covers it at launch.
- **Variable-data bulk orders** — forty plaques with forty different names from a spreadsheet. Included in Commerce Pro.
- **Purchase orders and net-30 invoicing** for corporate buyers.
- **Subscriptions or a loyalty program.** No evidence yet that your customers want one.
- **AI search visibility work** — worth starting around month four, once there is a store for people to be sent to. Priced in the add-ons below.

Next.js, Square, Supabase

Shopify would be faster to stand up and we would normally recommend it. We are not recommending it here, for three reasons that are specific to your business.

The personalization is the product. A live engraving preview that changes with style and placement is not a variant picker, and getting it to behave inside a Shopify theme means fighting the platform on the one feature that differentiates you.

The group stores are custom by nature. Per-organization pages with fixed catalogues and their own branding are an app subscription and a set of compromises on Shopify. They are ordinary work on your own stack.

The fees do not creep. Shopify is a monthly platform fee before you have added anything, and the two features that make this store yours — the personalization engine and the group stores — are exactly the things that become paid apps stacked on top of it. Square takes its per-transaction fee and that is the end of it. On a \$148 board the difference is real, and it does not grow as the site does.

One place to manage it — and it is yours. Products, pricing, photography, categories, orders, proofs, and quote requests all live in a single admin built for you to run day to day, without calling us for a price change. We keep the engraving templates themselves — where the text sits on each piece, the safe areas, the font metrics — because those are geometry rather than data, and getting them wrong makes every preview on the site look wrong. Everything else is yours. Nothing about your catalogue depends on the payment processor either — so if you ever change how you take money, the store does not get rebuilt around it.

Practically: Next.js for the site, and Supabase for the catalogue, orders, engraving details, proofs, group stores, and quote requests. Square handles payments and nothing else — Web Payments covers cards, Apple Pay, Google Pay, and Cash App Pay, and settles straight to your bank. Your Square account is in your name; we never touch the money. Sales tax gets configured against the places you actually owe it, with you, during discovery — not guessed at. Product data, customer list, and content are exportable at any time.

Two ways to pay for it

OPTION A · RECOMMENDED

Monthly plan, nothing down

We carry the build cost across the term. No setup fee, no interest, no deposit. Hosting, security, support, SEO upkeep, and ongoing changes are all inside the monthly price. Month-to-month after the term.

Commerce Launch

Everything in the scope above

\$449

PER MONTH

Commerce Pro

+ group stores, bulk name lists, quote agent

\$699

PER MONTH

\$0 down · first payment on launch day · steps down to care once the build is paid off

OPTION B

Buy the build outright

Pay for the build once and own the code. Care is then separate, month-to-month, and you can leave whenever you like. Half to start, half on launch.

Commerce Launch build

One-time

\$6,000

ONE TIME

Commerce Pro build

One-time

\$10,700

ONE TIME

Commerce Care

Hosting, security, SEO, edits, support

\$249

PER MONTH

No term on care · cancel any time · you own the code

What the price is made of

Commerce Launch, itemized. Nothing here is a separate purchase — it is one project, and this is simply where the work goes.

THE BUILD		HOW \$449 A MONTH IS BUILT	
Custom design and front-end build, eight pages	\$1,500	Build carried across the term \$6,000 ÷ 24 months	\$250
Catalogue, cart, Square checkout, tax and shipping rules	\$1,150		
Personalization engine with live engraving preview	\$950	Care and upkeep hosting, security, SEO, edits, support	\$249
Order dashboard and proof approval workflow	\$650	Plan credit for staying on the plan	–\$50
Admin portal — products, pricing, images, categories, quote inbox	\$1,200		
Content load, QA, accessibility, SEO setup, launch and training	\$550		
Build total	\$6,000	Commerce Launch	\$449

That credit is worth \$1,200 over the life of the build — which is exactly why the plan comes out below buying the build and the care separately.

Commerce Pro works the same way: a \$10,700 build carried at \$450 a month plus \$249 care, landing at \$699. For reference, our standard eight-to-twelve page business website is \$1,950 on its own. The design and build line above is \$1,500 — the other \$4,500 is the storefront, the personalization engine, the order and proof system, the admin portal, and the Square integration.

After the build is paid off

Once the build is covered, the plan steps down — you stop paying for something you have already bought. From there it is month-to-month care, priced against the size the store has actually grown to.

COMMERCE CARE	SUITS	PER MONTH
Standard	Up to 40 products, ordinary order volume	\$249
Growth	Up to 150 products, higher volume, a monthly content batch	\$349
Scale	Unlimited catalogue, priority support, quarterly strategy review	\$499

We review the tier once a year against what the store is actually doing. Real growth moves you up a tier — but it never leaves you paying build costs on a build that is finished.

The two paths over 24 months

PATH	DUE AT SIGNING	MONTHLY	24-MONTH TOTAL
A — Commerce Launch plan	\$0	\$449	\$10,776
B — Launch build + care	\$3,000	\$249	\$11,976
A — Commerce Pro plan	\$0	\$699	\$16,776
B — Pro build + care	\$5,350	\$249	\$16,676

At the Launch level the plan costs \$1,200 less over two years and asks for nothing up front. At the Pro level the two land within \$100 of each other — the plan simply does not require \$10,700 on day one. Option B's "due at signing" is the 50% deposit.

Add-ons

ITEM	WHAT IT IS	PRICE
Product photo prep NEW	Retouching and consistent backgrounds for up to 40 products, from photos you supply	\$600
Additional group store NEW	One more organization page with its own catalogue and branding	\$450 each
Visibility Baseline	What AI assistants say when someone asks who engraves near you — 73-check audit, 55 buyer questions, prioritized roadmap	\$750
Visibility Launch	Three-month implementation phase, then steps down to Watch at \$300/mo	\$750 / mo × 3
Booking & scheduling	Consultations and shop appointments booked online	\$600
ADA compliance audit	Full audit and remediation beyond the accessibility pass already included	\$500
Analytics dashboard	Google Analytics configured and reported against your own goals	\$300
Spanish-language site	Full second-language build	\$800

Items without a "New" tag are at our standard published rates.

Work outside this scope

This is already a heavily customized build, so the line matters. Day-to-day catalogue work is yours to do in the admin whenever you want to — and if you would rather hand it to us instead, it is still covered by your plan at no extra cost. For everything else the rule is simple: keeping what we built working and current is covered; building something that did not exist before is quoted.

COVERED BY YOUR PLAN

- Adding, removing, and editing products, prices, and variants
- Swapping photography and rewriting copy on existing pages
- Policy, shipping, and lead-time updates
- Bug fixes on anything we built
- Hosting, SSL, backups, security patching, uptime monitoring
- SEO upkeep and the monthly report
- Email and phone support

QUOTED AT \$150 AN HOUR

- New pages or new sections that were not in the scope above
- New features, or product templates beyond the six included
- Integrations with other systems — accounting, shipping labels, email platforms
- Design work on something new, rather than edits to something built
- Revision rounds beyond the one included in the design phase
- Data migration or bulk imports from another system
- Rush work that displaces scheduled projects

You will never get a surprise invoice. We scope the request, send you a written estimate with an hour count, and start nothing until you approve it. If the work comes in under the estimate, we bill the lower number.

What we would do in your position

Commerce Launch on the monthly plan, plus photo prep if your current photography is not shoot-ready. It gets the store live and earning before you have spent anything, and every capability held back for Commerce Pro is one you can add the month a real customer asks for it. Revisit AI search visibility at month four, once there is somewhere to send the traffic.

PHOTO PREP, OPTIONAL

8 wks

TO LAUNCH

Eight weeks, start to store

WEEK 1

Discovery

Product list, pricing, variants, lead times, shipping and returns rules. Square account connected, or opened in your name if there isn't one yet. Domain and registrar access. Brand system locked from your existing artwork.

WEEKS 2-3

Design

You have already seen the four screens that matter. We finish the remaining pages, refine against your feedback, and you approve the set. One full revision round included.

WEEKS 4-6

Build

Catalogue and filtering, the personalization engine and live preview, Square checkout with tax and shipping, the order dashboard, and the proof approval workflow.

WEEK 7

Load and test

Products, photography, copy, and policies go in. End-to-end test orders through the Square sandbox, mobile QA, accessibility pass, page-speed tuning.

WEEK 8

Launch

DNS cutover, analytics live, Google Business Profile updated, and a 90-minute session walking you through the admin — adding products, uploading photography, running the proof workflow, and answering quote requests — with a written guide you can hand to a new employee. We watch closely for the first two weeks.

What we need from you

Every one of these is small on its own. Together they are the only thing that reliably moves a launch date.

01 Photography BIGGEST RISK

Two to three images per product on a consistent background. The Six Eight look you liked *is* its photography — the design cannot carry it alone. Send us what you have and we will tell you honestly whether it is enough, retouch it for \$600, or brief a local shooter.

02 Product list

Names, prices, sizes, materials, lead times, and what is personalizable. A spreadsheet is perfect; a photo of a notebook page is workable.

03 Shipping and returns rules

What you charge, where you ship, how fast, and your position on returns of personalized work. We will draft the policy pages; you approve the substance.

04 A Square account

In Signet Laser's name with your bank details. If you already have one we connect to it; if not, opening it takes about twenty minutes and we will walk you through it. You hold it, you own it, the money goes to you — we connect to it and nothing more.

05 Domain access

Login to wherever the domain is registered, or the ability to add the DNS records we send you.

06 Vector artwork

The original wax seal and wordmark files. We have been working from the JPEG; the masters will look better at every size.

07 One decision-maker

Someone who can look at a design and say yes. Approval by committee is the second most reliable way to move a launch date.

NEXT STEPS

Say the word and we start *Monday*.

The mockup you have seen is real work, not a sales prop — it becomes the design phase of this project. Nothing here is locked; if the scope should be different, tell us and we will re-cut it.

Pick a path

Option A or B, Launch or Pro. We send an agreement the same day.

Send the list

Products and photography. This is what actually starts the clock.

Week one

Discovery call, Square and domain sorted, design phase opens.

Bodark Systems

901.409.4026

derick@bodarksystems.com

Derick Mayberry

Terms summary. Prices are in USD and hold through 10 October 2026. Option A: \$0 down, first payment on launch day, 24-month minimum term. The term is simply what carries the build cost — there is no deposit and no interest — and at the end of it the plan steps down to Commerce Care, month-to-month from \$249, rather than continuing at the plan rate. Option B: 50% to begin, 50% on launch, with care month-to-month and no term. You own your content, product data, customer list, photography, and Square account in both cases; code ownership transfers with the one-time build and is licensed for the life of the plan under Option A. Third-party costs — domain registration, Square processing fees, any stock or paid fonts — are billed at cost or paid directly by you. One full revision round is included in the design phase. Work outside the scope described in Section IV — including further revision rounds — is billed at \$150 per hour against a written estimate approved by you in advance; no out-of-scope work is ever started, or invoiced, without that approval. This document is a proposal and a scope, not a contract; a full agreement follows on acceptance.
